ABOUT

Weitkämper Technology, established in 1994, delivers solutions for Intelligent Search, Classification and Navigation.

Our products help people to find, explore and understand information.

In a new, intuitive way.

CUSTOMERS AND AWARDS

Customers include Babcock, BMW, Bosch, Electrolux, the German Ministry of Finance, Frankfurter Allgemeine Zeitung, Beck, Wolters Kluwer and many more.

In honor of our pioneering work, we have received the digita, the European Comenius Medal and the German Innovation Price ITK 2007 and 2008 in the field of Knowledge Discovery.

Weitkämper Technology

UNLOCK THE POWER OF YOUR INFORMATION.

Leave the old ways of search to explore new values.

XSEARCH Software unlocks the power of your data. It helps your users find exactly the information they need. In a new, intuitive way.

We provide search enhancements for usage »on top« of your search

SEARCH IS CHANGING. NAVIGATION IS CHANGING.

engine or database system - without any need of changing their architecture. For easy integration within a few days.

Established in 1994, Weitkämper Technology has been focused on how to make search work better for more than a decade. Our partnership with technology leaders helps us to realize the full potential of search.

XSEARCH Clustering Engine

XSEARCH Clustering Engine helps users to find and better understand the information they need. Instead of only seeing tens of thousands of search results, the users see a broader context of their queries - results grouped into thematically similar clusters. The clusters are generated dynamically, »on the fly«, in real-time at the moment of search.

XSEARCH Suggest

XSEARCH Suggest helps users to pinpoint exactly the information they desire. It lists search results as they type their query. Dynamically and in real-time. Precisely tuned to your content. It saves time and lets users browse while searching. By integrating state-of-the-art algorithms XSEARCH Suggest responds even for millions of entries within just milliseconds.

XSEARCH DidYouMean

No matter whether you offer paid content, run a Portal, Intranet or Shop: For many visitors, search is the first gateway into your offerings. This stage is critical: Does your search manage the conversion click? Does your search succeed in turning visitors into customers? Surely not, if they only get »No results found«.

XSEARCH DidYouMean offers suggestions to the visitor exactly matching your content. It combines intelligent algorithms with linguistic resources into one unique technology. It maps language phonologically and generates the matching sound patterns for every word. Instead of only using mathematical approximations, terms of similar pronunciation are returned.

XSEARCH Summarizer

XSEARCH Summarizer increases productivity and efficiency by offering concise summaries of content. It combines morpho-syntactic analysis with statistical algorithms. Therefore, summaries are concise and precise. Various parameters can be adjusted to improve results adapted to your content.

XSEARCH Linguistic

A linguistic platform for morpho-syntactic analysis of most European languages. It serves for the identification of basic word forms, splitting of compound words, generation of

inflected forms, linguistic stemming, Part of Speech Tagging or the access to synonyms and thesauri. The system combines huge dictionaries with other linguistic modules and delivers ultra fast results, due to its sophisticated architecture. XSEARCH Linguistic is a requirement for Knowledge Discovery operations like keyword-extraction, clustering, categorizing or building feature vectors.

XSEARCH Federated Search

XSEARCH Federated Search is the Meta Search Engine infrastructure for Portals and Enterprises. By submitting a query you get results from multiple search engines that are dynamically merged in a single list. It enables users to access all necessary information with a single-query. Different sources from your Intranet and beyond, subscription-based content or any public site on the Internet can be searched in one instant. All results are dynamically merged, filtered and ranked. The solution relies on a 100% Java infrastructure and supports many UNIX, Linux and Windows systems.

XSEARCH Facet Navigator

»Drill down« selection is the most powerful way of viewing relationships within information sets. By using parameters to categorize data, it provides the easiest navigation and quickest access to search results. You can easily filter out irrelevant information, and maybe even discover aspects you wouldn't have spotted at all using a regular search engine. XSEARCH Facet Navigation is a complete standalone framework which keeps all relationships in a super compressed parametric index and offers enormous speed. By integrating an open relationship concept between its index and external document IDs or database tables, it is designed to enhance any search engine or eCommerce application with faceted navigation.

XSEARCH Entity Extractor

It identifies entities like Persons, Locations, Companies or expressions of time. Knowledge Discovery applications including publishing, eCommerce, content management, CRM or search benefit from this classification by providing more information with greater accuracy. Or to offer an explorative view by integrating entities into our Facet Navigator.

SIMFY enables consumers to locate and share legally more than 6,000,000 music titles and artists on the Internet. »The intuitive and easy search is an integral aspect of our service,« says Steffen Wicker, co-founder of simfy.com. »XSEARCH Suggest is the only solution to satisfy the high standards of our customers.«

GENIOS is the premium business content provider in Germany. »XSEARCH DidYouMean is a further step towards providing perfect search, even for terabytes of data,« says Markus Rohjans, head of product development.
